

Jose David Gonzalez

Data Engineer | Databricks · Spark · AWS (Redshift, Lambda, S3) · Python · SQL | Supply Chain Data Platforms & AI Agents

Hollywood, FL · +1 (786) 516-0915 · josedago1163@gmail.com · josedavidgt.com · linkedin.com/in/davidgt1 · github.com/DeiviGT1

SUMMARY

Data Engineer with 4+ years of experience building data platforms, pipelines and analytics solutions across supply chain, e-commerce and beverage distribution. Currently at Southern Glazer's Wine & Spirits, building the supply chain data platform on Databricks (Spark, Unity Catalog) and event-driven ETL on AWS (Redshift, Lambda, S3), plus AI agents and internal data applications that replace legacy reporting systems. Spanish (native) · English (fluent).

SKILLS

Data platforms	Databricks (Spark, Unity Catalog, Genie), AWS Redshift, Lambda, S3, Redshift Data API
Databases	PostgreSQL, advanced SQL, stored procedures, data modeling and lineage, SQL Server
Analytics & BI	Power BI, Tableau, Databricks dashboards, Excel (advanced, VBA)
Programming	Python (pandas, numpy, scikit-learn), PySpark, JavaScript/React, Swift, VBA
AI	Agent development and deployment into internal applications; OpenAI API

EXPERIENCE

SCM Decision Analytics Developer (Data Engineer)

Dec 2025 – Present

Southern Glazer's Wine & Spirits · Miami, FL

- Build and operate the supply chain data platform on Databricks — Spark jobs, notebooks and apps across multiple distribution centers — administering Unity Catalog schemas and access and tuning compute/SQL warehouses.
- Built the first complete data lineage map of the Redshift warehouse: parsed dependencies for ~2,000 tables and views into an interactive graph of 3,000+ relationships.
- Developed an internal application that migrates legacy SAP BusinessObjects reports into a modern reporting layer, generating formatted reports and Tableau extracts distributed automatically by email.
- Build and deploy AI agents (Databricks Genie and custom agents) embedded in internal applications for business users.
- Integrate Redshift, PostgreSQL and external servers into a single analytics layer with event-driven ETL on AWS (Lambda, S3, Redshift Data API); support the SAP S4/ECC migration with PostgreSQL stored procedures.
- Automated recurring reporting (Databricks, Power BI, Tableau), cutting a critical daily report from 1–2 hours to 5 minutes.

Store Manager & Developer

May 2024 – Dec 2025

Gato Tuerto Liquor Store · Miami, FL

- Led the end-to-end development of the store's website (React, Node, GCP), boosting online sales by 10% and doubling organic traffic after SEO work and a 45% cut in Largest Contentful Paint.
- Designed a barcode-based weekly inventory system that replaced manual logs, delivering counts 8× faster and enabling analysis of shortages and surpluses.

Business Consultant

Apr 2024 – Sep 2025

Freelance · Miami, FL

- Advised a startup on iOS development (Swift + Firebase): modular architecture, CI/CD and guidelines; the MVP shipped 30% ahead of schedule and passed App Store review on the first submission.
- Engineered Python + PostgreSQL scraping pipelines and interactive dashboards over tens of thousands of records (Miami market, football datasets) delivering insights on pricing, location and performance.

Business Planning Analyst

Sep 2021 – Apr 2024

Mattelsa · Medellín, Colombia

- Supervised inventory allocation across warehouses and built SKU-level Power BI dashboards; stock turnover +15% and overstock -12% within six months.
- Migrated operational data to the SQL data warehouse, automating ETL with Python and VBA: load times from 3 h to 45 min.
- Designed competitive web scrapers tracking ≈50,000 SKUs across 8 rival stores for weekly pricing intelligence.
- Developed Random Forest / XGBoost models with 92% accuracy predicting post-sale garment ratings, flagging 70% of low-performing items before production.

eCommerce Analyst

Nov 2020 – Aug 2021

Mattelsa · Medellín, Colombia

- Negotiated carrier agreements and built Power BI dashboards benchmarking thousands of shipments by rate, transit time and service level; automated carrier payment reconciliation with VBA.

Administrative Assistant

Dec 2018 – Nov 2020

S.O.S. Llaves y Claves · Antioquia, Colombia

- Implemented a barcode-enabled Excel inventory system that cut stock discrepancies by 30% and freed 15% of tied-up capital; weekly sales and turnover reports shortened the restock cycle by 20%.

EDUCATION

MSc in Big Data and Data Science — VIU — Universidad Internacional de Valencia

2026 – 2027 (in progress)

BSc in Management Engineering — Universidad Nacional de Colombia, Medellín

2018 – 2023
